INDEX.

Acari in chemical solutions, 378.
Acclimatization of antelopes, kangaroos, etc., 263.
Achnanthes longipes and brevipes on ships' bottoms, 192.
Achnanthidium lineare, a fresh-water diatom, 196.
Achromatic microscope, new, 83.
Aguirre, voyage of, 209.
Alloys and compounds of aluminium, 188.
Alloys and compounds of copper, 69.
Aluminium, 176; compounds, 185.
Amphiprora lepidoptera on Corallina, 196.
Amphitetras, localities of, 192.
Analysis by spectrum, 362.
Ancients acquainted with few metals, 176.
Ancient and modern finger-rings, 57.
Andaman Islands, history of, 79.
Angler fish, 353.
Animals likely soon to become extinct, 250.
Antelopes, new species, 259.
Anthidium manicatum, a British bee, 167.
Anthophora elegans, a South American bee, 173.
Antiquities and Philology.—Roman cemetery of Uriconium, 33; ancient and modern finger-rings, 57; derivative character of Chinese literature, 84; cuneatic writing, 98; Mediæval England, 137; flint arrow-heads, 152; shell mounds, 239, 483; Roman ring-keys, 242; Roman mining, 295; money and moneyers, 405; gigantic antlers, 397.
Apathus barbutellus, a parasite on Bombus, 167.
Arachnoidiscus, where to find, 191.
Artemia salina, 453.
Artesian well at South Kensington, 159.
Artificial crystals, 83.
Artificial light in spectrum analysis, 365.
Artificial production of varieties of insects, 76.
Aryandes, coins of, 406.
Asilus fasciatus, a fly-bee, 171.
Assyrian history, studies of, 99.
Asterionella formosa, habitat of, 196.
Astronomical discovery in 1861, 2.
Astronomical photographs, 324.
Astronomy.—Recent discoveries in, 2; earth in comet's tail, 63; transit of Mercury, Nov. 12, 1861, 71; double stars, 142, 266, 431; comet of 1861, 162; Intra-Mercurial planets, 162; heights of meteors, 217; planets discernable in April, 1862, 230, May, 265, June, 373, July, 431; Hind's variable nebula, 244; comet of 1860, 244; companion of Sirius, 324, 401, 482; Foucault telescope, 380; Saturn's ring, 431; transit of Titan, 481; spiral nebula, 481; new planet, 484.
Aulacodiscus Oregonus, localities of, 191.
Aurora borealis, characteristics of, 369.
Australian geography, 7.
Australian gold, total amount in England, 321.
Australian naturalists, 469.
Aye-aye, habits of, 80, 130.

Bacon and Linnæus, parallel suggested, 247.
Bakewell's copying telegraph, 163.
Balbiani on Infusoria, 463.
Balloon ascents for scientific purposes, 428.
Baltic, why oysters are not found there, 83.
Bee, queen, how produced from mother egg, 76.
Bees and their counterfeits, 165.
Bessemer's process of steel manufacture, 427.
Betrothment ring of Luther, 61.
Biddulphia regina in stomachs of Ascidians, 192; pulchella, 192.
Blondeau's reformation of the Mint, 415.
Bolides, 482.
Bombus hortorum, garden humble-bee, 167.
Bones, antiquity of, 161.
Bone and flint arrows found at Wookey Hole, Somerset, 152.
Books on zoology, 262.
Bos taurus and varieties, 260.
Botany, high demands of as a science, 460.
Botany.—Welwitschia mirabilis, 81;

poisonous fungi, 244; hybernation of fungi, 288; fertilization of orchids, 320, 327; vegetable amœboid bodies, 403.
Brain-case of Bos buffalus, 458.
Brighton well, 404.
Burial customs of the Romans, 36.
Burke's exploring expedition, 7, 78.

CÆSIUM, how discovered, 365.
Caloric-engines at International Exhibition, 426.
Cambodia, 239.
Camphor, movements of, on water, 235.
Campylodiscus - ecclesianus, ambiguus, cribrosus, and imperialis, 193.
Canine madness, 482.
Carbolic acid, 162.
Carbon and hydrogen, 324.
Carbonic acid as an anæsthetic, 483
Carpenter bees, 336.
Cartilaginous fishes, 226.
Castration, effects of, on individuals and races, 257.
Cemetery of Uriconium, 34.
Central valley of Scotland, last elevation of, 319.
Centris flavopicta, 337; denudans, 338.
Cephalosiphon limnias, 49, 234.
Cephalopods, gigantic, 82.
Cesia eumenoides, 173.
Champollion's researches on cuneatic inscriptions, 99.
Chemical analysis by diffusion, 5.
CHEMISTRY.—Recent discoveries in, 5; artificial crystals, 83; absorption of heat by gases, 155; formation of siliceous minerals, 156; adulteration of tinfoil, 161; carbolic acid, 162; petroleum springs, 163; heliochromy, 163; action of iodine on tin, 164; aluminium, 176; oxidized oil, 320; sodium spectrum, 323; carbon and hydrogen, 324; spectrum analysis, 362; dialysis, 381; portable styptic, 403; experiments on solubility, 481; paraffin oils, 482; logwood as a disinfectant, 483; carbonic acid as an anæsthetic, 483; action of mordants in dyeing, 475; oxide of ethylene, 476.
Chinese literature, derivative character of, 84.
Chirocephalus diaphanus, 451.
Chloride of aluminium, production of, 180.
Chloride of sodium, discovered by the spectrum, 364.
Chydorus sphœricus, 446.
Choroid gland, muscularity of, 200.
Chromic acid, use of, in examination of eye-ball, 199.
Chronograph, new, 402.
Chrysantheda, a species of bee, 338.
Circulatory system of fishes, 225.
Climates of the earth, changes of, 332.
Cocconeis scutellum on Cladophora, 195; Thwaitsii, 197.
Cod-fish, eye of, 199.
Coinage of the ancients, 406; of early English period, 408.
Coins found at Uriconium, 45.
Colletonema eximium, a rare diatom, 195.
Colour blindness, instances cited, 112.
Colour and vision, 103.
Colymbus glacialis, 357.
Coma of comets, 64.
Combustion, a generation of force, 14.
Comets, density of, 66.
Comets, new theory of, 242.
Comet of 1861, 162; of 1860, 244.
Companion of Sirius, 401, 482.
Complementary colours of double stars, 149.
Cone, structures in eye of cod-fish, 205.
Consanguinity a key to varieties, 253.
Cookery in the Middle Ages, 141.
Copper, jottings on, 67.
Coral, development of, 402; growth of, 161.
Corticium arachnoideum, a sclerotoid fungus, 293.
Coscinodiscus subtilis on Dutch rushes, 192.
Cosmical phenomena investigated, 3.
Cremation, how performed by the Romans, 37.
Crocisa picta, a South American bee, 173.
Cryolite, a source of aluminium, 182.
Cryptogamic botany, advance of, 294.
Crystallizations for polariscope, 404.
Crystalloids, behaviour of, 383.
Cuckoo bees, 165.
Cuneatic characters, how first explained 98.
Currencies of the ancients, 405.
Cuttle-fish, shell of, 174.
Cuvier and Linnæus, their respective labours, 246.
Cuvier's "Règne Animal" cited, 246.
Cyclops, a modern, 403; quadricornis, 446.
Cyclotella operculata, habitat of, 197; punctata, valves of, 195.
Cysts of diatoms, 402.

DAPHNIA rotunda, ephippium of, 450.
"Darics" and "Philips," coins so called, 405.
Deep sea life, curiosities of, 6.
Deglutition of ophidians, 127.
Designs for manufactures suggested, 113.
Design, use of microscope in, 111.
Development of life on the globe, 330.
Dialysis, 381; principles of, 6.
Diatoma hyalinum in timber ponds, 192; vulgare and elongatum, 196.

Diatom cysts, 402.
Diatoms, hunting for, 190.
Diffusion of rubidium, 481.
Diseases of man and animals, 243.
Disinfecting uses of logwood, 483.
Disk, petaloid, of Cephalosiphon limnias, 51, 54.
Distoma crassum, veliporum, and gigas, etc., described, 28; species from animals in the Zoological Gardens, 348.
Distomidæ, notes on, 24, 116.
Divining rod, 241.
Divisibility of matter, 162.
Domestication of science, 471.
Double stars, 142, 266.
Dragon-fly, vision of, 105.

Earth in comet's tail, 63.
Electrolysis for obtaining aluminium, 183.
Electro-magnet as a motive power, 21.
Electro-magnetic engine at International Exhibition, 426.
Electro-plating and gilding, 339.
Elephant likely soon to be extinct, 251.
Embryogeny, 161.
Engineering, progress of, in 1861, 9; first applications of, 10.
Entomostraca, 446.
Epithemia musculus in bogs, 195; parasitic on Zostera, 192.
Ericsson's caloric-engine, 20.
Error, sources of, in geology, 327.
Ether vapour as a motive power, 17.
Ethnology of Australia, 393.
Ethylene, oxide of, 476.
Euglossa analis, and pulchra, Brazilian bees, 337; dimidiata described, 170; cordata, 173.
Eumenes esuriens, an Indian wasp, 173.
Eupodiscus argus on Dutch rushes, 192; Ralfsii and subtilis on corallina, 196.
Exhibition tactics, 375.
Exotic bees, 334.
Expeditions for scientific discovery, 7.
Extinct animals, 250.
Eye of cod-fish described, 199.
Eyes of insects, 103.

Fasciola gigantea described, 28; hepatica figured and described, 117, 347.
Feathered reptile of Solenhofen, 367.
Fecundation of Infusoria, 465.
Fecundity of Entomostraca, 453.
Fermentation and generation of Infusoria, 89.
Fermentation, M. Pasteur on, 241.
Fertilization of orchids, 388.
Feudal forms and usages, 140.
Finger-rings, ancient and modern, 57.
Fish world at home, 223.
Flint arrow-heads, natural formation of, 152.
Flukes, physiology and habits of, 25, 347.
Flying-fish of the British coast, 47.
Force, mechanical, produced by heat, 13; Dr. Tyndall on, 480.
Fossil remains of man, 157.
Foucault's telescope, 380.
Four-horned sheep, curious specimen of, 260.
Fragillaria striatula on seaside stones, 195.
Funereal customs of the Romans, 38.
Fungi, hybernation of, 388.
Fungous disease, 483.

Gas-engine, Brunel's, 19.
Gases, absorption of heat by, 155.
Geography.—Progress of discovery, 6; Burke's exploring expedition, 78; Kilimandjaro, 154; ascent of the Ogun, 155; voyage of Aguirre in search of El Dorado, 209; Cambodia, 239; Highlands of Peru, 278; ascent of Yang-tse-Kiang, 394; Fiji Islands, 396; Vancouver's Island, 397.
Geological value of recent occurrences, 370.
Geology and Mineralogy.—Eruption of Vesuvius, 84; bone and flint arrow-heads found at Wookey Hole, Somerset, 152; formation of silicious minerals, 156; fossil remains of man, 157; artesian wells, 159, 404; antiquity of bones, 161; land animals of the coal measures, 163; volcanic island in the Caspian, 163; ice-worn rocks of Scotland, 236; volcanic phenomena in Manilla, 241; Roman mining, 295; last elevation of Central Valley of Scotland, 319; trepidation of the soil at Nice, 324; life changes on the globe, 325; geological value of recent occurrences, 370.
Geology as related to zoology, 252.
Germs, organic, distribution of, 89.
Glass vessels found at Uriconium, 42.
Gleanings from the Exhibition, 398.
Gold coins of the ancients, 406.
Goldsmiths' work in Middle Ages, 61.
Gomphonema marina on Cladophora, 195; geminatum and ventricosum, 196.
Grammatophora serpentina and marina, 191; serpentina on algæ, 192.
Grecian finger-rings, 58.
Griphosaurus, the feathered reptile, 367.
Grotefend's researches on cuneatic inscriptions, 99.
Guinea-worm, 483.
Guramie, introduction of, to Australia, 470.

Hail and snow, 428.
Hailstones of the 7th of May, 1862, at Tynemouth, 444.

Hairless men of Australia, 393.
Haunts of the condor, 278.
Heart, movements of, 84.
Heliochromy, 163.
Heliography, 243.
Heterogenesis, theory of, 91.
Himantidium undulatum in brooks, 196.
Hind's variable nebula, 244, 401.
Hippocampus, habits of, 469.
Historical tests of the permanency of species, 254.
Hive bee and its congeners, 166.
Homœopathic medicines and the spectroscope, 404.
Homomorphism as a basis of classification, 249.
Horned animals, curious points in their history, 258.
Houses with one chimney, 83.
Hurricane of May 1862, 436.
Hyæna cave at Wookey Hole, Somerset, 152.
Hylaosira delicatula on marine algæ, 195.
Hybrids, fertility of, 160.
Hybrid hares and duck, 255.

Ice-worn rocks of Scotland, 236.
Icthyology, studies of, 223.
Idol head of the Jívaros, 135.
Ignition-gas engine, invention of, 20.
Incubation of the python, 237.
Industry, new temple of, 212.
Infusoria, experiments on production of, 87, 463.
Infusorial life, conditions of, 85.
Injection of the eye of the cod-fish, 203.
Improvement in kelp manufacture, 402.
Insect destroyer, 401.
Insect vision and sleep, 102.
Insects, nerves of, 241.
Insects, varieties of, artificially produced, 76.
International Exhibition.—Architecture and decorations, 212; Exhibition tactics, 375; machinery, 421; miscellaneous gleanings, 398.
Intra-Mercurial planets, 162.
Iodine, effects of, on tin, 164.

Jenyns's memoir of Henslow, 459.
Jívaros, idol of, 135.
Jottings on copper, 67.
Jupiter, satellites of, 232.

Kilimandjaro, ascent of, 154.

Land animals of the coal measures, 163.
Lead mines of the Romans, 307.
Leeches, 402.
Lepidosiren, 322.
Leporines produced at Zoological Gardens, 255.
Licmophora flabellata in salt lagoons, 195.
Life, infusorial, 85.
Life changes on the globe, 325.
Light, influence of, in the generation of infusoria, 90; dispersion of, 82.
Liver entozoon of cattle, 115.
Locomotive engines, four-cylinder, 423.
Logwood as a disinfectant, 483.
Lophius piscatrix, 353.

Machine-tools at International Exhibition, 423.
Machinery at Great Exhibition, 421.
Man, fossil remains of, 157.
Mangold-wurzel fly, 82.
Markings on diatoms, 404.
Marsupials, Linnæan arrangement of, 247.
Mechanical powers analyzed, 11.
Mediæval customs, 139.
Mediæval England, 137.
Melicerta, relations of, to Limnias, 50.
Melosira nummuloides and Borrerii, 193.
Mesozoic life in Australia, 483.
Metallic earths, Davy's researches on, 178.
Metallurgy of the Romans, 296.
Metallurgy.—Jottings on copper, 67; aluminium, 176; fusibility of iron, 240; Roman mining, 295; Australian gold, 321; electro-plating, 339; new alloys, 403; diffusion, 481.
Meteorology.—Progress, 4; Hadleian theory of winds, 244; observations at Kew, 309; atmospheric perturbations, 368; hail and snow, 428; hurricane of May, 1862, 436; soap-bubbles and meteorology, 484.
Meteors, observed heights of, 217.
Mexican civilization, 210.
Microscopy.—Cephalosiphon limnias, 49, 234; parasites, 24, 199, 347; polariscope objects, 82, 174, 401, 404; universal achromatic microscope, 83; application of microscope to the art of design, 111; shell of cuttle-fish, 174; hunting for diatoms, 190; eye of cod-fish, 199; microscopic writing, 324; silkworm disease, 401; diatom cysts, 402; amœboid bodies, 403; markings on diatoms, 404; Entomostraca, 446; infusorial life, 85, 463; museum microscope, 398.
Microscope, use of, in design, 111.
Microscopic writing, 324.
Milk, physiological effects of, 160.
Mint, consolidation of English, 410.
Mints, origin of, 407.
Molecular repulsion, 287.
Money and moneyers, 405.
Monographs, zoological, 263.
Mordants, action of, 475.
Mountain barometer, 484.
Museum microscope, 398.

Mutual help in scientific studies, 473.
Mythology of South America, 135.

NATURAL HISTORY AND ZOOLOGY.—Flukes, 24; skipper, 46; new rotifer, 49; insect varieties, 76; production of queen bee, 76; brain of quadrumana, 78; aye-aye, 80, 130; Welwitschia, 81; mangold-wurzel fly, 82; circulation of tadpole, 82; oysters not found in Baltic, 83; infusorial life, 85; insect vision and sleep, 102; liver entozoon of cattle, 115; incubation of the python, 123, 237; fossil remains of man, 157; bees and their counterfeits, 165; diatoms, 190; eye of cod-fish, 199; fish world at home, 223; dicyodont reptilia, 236; progress of zoology, 245; haunts of the condor, 278; fungi, 288; silk-producing moths of Asia, 321; lepidosiren, 322; vocal fishes, 324; exotic bees, 334; parasites from the Zoological Gardens, 347; angler fish, 353; feathered reptile of Solenhofen, 367; acari in photographic baths, 378; hairless men of Australia, 393; leeches, 402; Entomostraca, 446; frontal sinuses of Bos buffalus, 457; Australian naturalists, 469.
Navicula ellipsis, ambigua, elegans, cuspidata, tumeus, Jennerii, 196; and mutica, 194.
Nebula, spiral, 481.
New alloys, 403.
New Guinea, trade of, 81.
New rotifer, 49, 234, 404.
New planet, 484.
Nice, trepidation of soil at, 324.
Nitzschia sigma and dubia, 194; palea, 196.
Nutrition of acari, 379.

OAK timber, decay of, in sea-water, 249.
Oceanic life, distribution of, 224, 249.
Odontidium mesodon in brooks, 196.
Ogun, account of, 155.
One-chimney houses, 83.
Ophidian reptiles, 124.
Ophrys, fertilization of, 390.
Orchids, fertilization of, 320.
Orthosira arenaria, mirabilis, and spinosa, 197.
Oxæ flavescens, an exotic bee, 337.
Oxides of copper 68.
Oxidized oil a substitute for elastic gums, 320.
Ovary of infusoria, a basis of classification, 464.
Oyster-shell Island, 483.
Oysters not found in the Baltic, 83.

PARAFFIN oils, 482.
Parasites in eye of cod-fish, 208.
Parasites of the order Trematoda, distribution and characters of, 25, 115.
Parasitic bees, 166.
Pasteur on fermentation, 241.
Pasteur's experiments on spontaneous generation, 97.
Peculiar greens, 402.
Pellicle on infusions, analysis of, 96.
Penicillium and sclerotium identical, 290.
Percy's metallurgy reviewed, 67.
Persian inscriptions deciphered, 101.
Petroleum springs of America, 163.
Peziza and sclerotium, how related, 293.
Phosphorescence of the sea, 483.
Photographic hints, 402.
Photography and ethnology, 162.
PHYSICS.—Discoveries in, 4; prime movers, 10; visible vibrations by voltaic currents, 77; dispersion of light, 82; crystals, 83; absorption and radiation of heat by gases, 155; divisibility of matter, 162; vis inertiæ, 164; heights of meteors, 217; volcanic action, 240, 241; solar repulsion, 286; Plateau's films, 319; spectrum analysis, 362; magnetic perturbations, 368; experiments on solubility, 481; mountain barometer, 484; Dr. Tyndall on force, 480.
Pig iron of the Romans, 299.
Pinnularia cyprinus and peregrina on ditch weeds, 194.
Planetary shadows, 72.
Planing machines at International Exhibition, 425.
Plateau's films, 319.
Pleurosigma fasciola, scalprum, angulatum, and strigilis, 194.
Podosphenias in salt lagoons, 195.
Poisons, classification of, 386.
Poisonous fungi, 244.
Polarization, preparation of microscopic objects for, 82, 175, 401.
Portable styptic, 403.
Potamogeton, diatoms of, 195.
Potassium, use of, in obtaining aluminium, 179.
Pottery, examples of Roman, 41.
Pouchet's experiments on spontaneous generation, 85.
Prime movers, 10.
Progress of science in 1861, 1.
Properties of aluminium, 184.
Pulex irritans, vision of, 104.
Python, incubation of, 123.

QUADRUMANA, posterior lobes of brain, 78.

RAILWAYS and health, 482.
Regenerative steam-engine explained, 15.
Reproductive system of the entozoons, 110; of the trematodes, 31.
Reptilia from South Africa, 236.

Reptilian economy and classification, 124
Respiration, M. Flourens on, 243.
Respiratory system of fishes, 225.
Retina of cod-fish, 205.
Reviews of Books. — Percy's Metallurgy, 70; Pasteur and Pouchet on Infusoria, 85; Wright's Mediæval England, 137; Bollaert's Expedition of Aguirre, 209; Monographs in Zoology, 245; Darwin on Fertilization of Orchids, 387; Jenyns's Memoir of Dr. Henslow, 459; Surveying Voyages in the Pacific, 478.
Rhabdonema arcuatum on algæ, 191; on Cladophora, 195.
Rhipidiphoras in salt lagoons, 195.
Rhizosolenia stiliformis in stomachs of Ascidians, 192.
Rodents, relations of, to Aye-aye, 133.
Roman burial in towns, 34; mining operations, 295.
Roman cemetery of Uriconium, 33; finger-rings, 59; ring-keys, 242.
Rotary steam-engines, first invention of, 16.
Rotifer (Cephalosiphon limnias) new to Britain, 49.
Rot in sheep, prevention of, 115.

Saturn's ring, 431; the only flat surface known, 265.
Saxon art in England, 139.
Scales and feathers, links between, 323.
Schizonema crucigerum and Dillwynii, 193; neglectum, frustules of, 198.
Schultze and Schwann's experiments on infusorial generation, 94.
Science, domestication of, 471; progress of, in 1861, 1.
Sclerotium complanatum and minutum, hybernation of, 289.
Sea-horse, note on, 469.
Sea-urchin, section of spine of, 113.
Sea-water, effects on oak timber, 239.
Sex, peculiarities of, in the bee, 335.
Shark, natural history of, 226.
Shell mounds of Malay peninsula, 239.
Shooting stars, observed heights of, 217.
Silicious minerals, formation of, 156.
Silk-producing moths of Asia, 321.
Silkworm disease, 401.
Sinuses in frontal bones of Bos buffalus, 457.
Sirius, companion star of, 324, 482.
Skeleton, living, 164.
Skipper, skopster, or saury, 46.
Slack's marvels of pond life, criticism on, 50.
Sleep of insects, 102; how induced in man and other animals, 109.
Soap-bubbles and meteorology, 484.
Sodium spectrum, 323.
Soil at Nice, trepidation of, 324.
Solar repulsion, 286.
Solitary bees, 434.
Solubility, experiments on, 481.
Species, definition of, 253.
Spectrum analysis, 5.
Spæhriæ and Sclerotia, relations of, 291.
Spiral nebula, 481.
Springs, distribution of, 481.
Star-finder, 323.
Stauroneis salina on ditch weeds, 194.
Steam crane at International Exhibition, 425; engines, improvements in, 422; hammer at International Exhibition, 425; power known to the ancients, 15.
Steel from Taranaki, 323.
Stellar movements and systems, 145.
Strength of man compared with animals, 12.
Sun, history of its heat, 3; metallic constitution of its vaporous envelope, 366.
Surirella Brightwellii in lagoons, 194; ovata in ditches, 198.
Synedra undulata found on algæ, 191.

Tabellaria fenestrata and flocculosa, 196.
Tadpole, circulation of, 82; physical development of, 153.
Talent, various values of, 406.
Tarapaca in Peru, products of, 278.
Telescope, work for, 265.
Terpsinæ musica, localities of, 191.
Terra cotta, examples of, found at Uriconium, 44.
Terrestrial magnetism, 244.
Thames valley, geology of, 370.
Tin, effects of iodine on, 164.
Tinfoil, adulteration of, 161.
Tissues, Dr. Beale on, 403.
Titan, transit of, 481.
